Abstract of JP2002010182

PROBLEM TO BE SOLVED: To realize a storage type broadcasting service even by a receiver having a low storage processing speed. The receiver having a low storage processing speed. The receiver is a storage processing speed to receive, and storage are 231 of a storage medium 230. Thereafter, storage data is extracted from the stored stream and decoded, data contrarts in the stored stream and decoded, data contrarts in the stored stream and decoded, data contrarts in the stored stream and the stored stored stream and the stored stream and the stream to a perioduction of the video video is the stream to a PID filter 222, and reproduction.
